Project: Combined Arms Virtual Trainers (CAVT)

Recipient: Tennessee Army National Guard

Address: Houston Barracks, Nashville, Tennessee 37204-1502

Subcommittee: Defense

Amount requested: $5,000,000

Project description: FY10 funding for the Combined Arms Virtual Trainers (CAVT) operating system is the Army National Guard's #1 priority for networking its virtual trainers. CAVT has been developed as the next "leap ahead" technology that will allow Army National Guard trainers (both fielded and yet-to-be procured) to network together on a Combined Arms virtual battlefield. The CAVT operating system allows soldiers and units to "train as they will fight" – as Combined Arms Teams. The networking capability provided by CAVT will exponentially improve training with all effected battle simulators.
